PRIFYSGOL ABERYSTWYTH UNIVERSITY

SEMESTER ONE 2025-26

Aberystwyth Business School

ABM1320: Advanced Corporate Finance

Time allowed: **THREE HOURS**

Answer FOUR questions from the following two sections:

Section A – Answer ALL PARTS in this section
Section A is worth 80% of the paper

AND

Section B- Answer ONE of the two questions in this section
Section B is worth 20% of the paper

Show all workings clearly and state any assumptions which you make for sections A and B

Present Value Tables are included at the back of the exam paper

The total mark available of this exam is **100** and contributes **60%** of the overall module mark

CALCULATORS ARE PERMITTED (Casio FX991, FX83 or FX85 models only)

MAE MODD I FYFYRWYR GYFLWYNO ATEBION I'R PAPUR HWN NAILL AI YN Y GYMRAEG NEU'R SAESNEG

STUDENTS MAY SUBMIT ANSWERS TO THIS PAPER IN EITHER WELSH OR ENGLISH

Once seated, students may complete the front cover of the answer book(s) and the attendance slip ONLY.

DO NOT TURN THE EXAMINATION QUESTION PAPER OVER UNTIL INSTRUCTED TO DO SO.

Section A

Answer All Parts in This Section

Solara is a publicly listed company on the London Stock Exchange (LSE), specialising in solar energy systems and smart grid technologies. The company has 25 million shares outstanding and is gaining attention for its innovative solar panel designs and AI-driven energy management systems.

The company currently has an outstanding bond with a face value of £120 million, maturing in 10 years. The bond pays a semi-annual coupon at a rate of 9% per annum, and its current Yield to Maturity (YTM) is 10% annually.

The company's equity has a beta of 1.85, reflecting moderate volatility. The expected market return is 13%, and the risk-free rate is 4%. Analysts predict that Solara will experience rapid earnings growth of 20% per year for the next three years, driven by government subsidies and global expansion. After this period, growth is expected to stabilise at 10% annually. The latest dividend paid by the company was £1.20 per share.

Solara is now evaluating a new five-year project to develop a modular solar battery system. The projected sales revenue is:

- Year 1: £750,000
- Year 2: £1,100,000
- Year 3: £1,350,000
- Year 4: £1,400,000
- Year 5: £1,250,000

Cost of sales is estimated at 60% of revenue, and annual overheads are £90,000. The company has already spent £40,000 on feasibility research. A new engineer will be hired at £65,000 per year. The project requires an initial investment of £1,200,000, with capital allowances at 18% reducing balance and a scrap value of £200,000. Due to the nature of the project, the company can claim capital allowances on the full investment amount. The company pays corporation tax at 19%, the project's required rate of return is same with the company's cost of capital, and Inflation is considered negligible.

Please Turn Over

Required:

(a) What is the current market value of Solara's corporate bond?

[5 marks]

(b) Using the CAPM, estimate the cost of equity of Solara Plc?

[3 marks]

(c) Assume an investor currently holds one share of the company and plans to sell it at the end of year three, immediately after receiving the third dividend, just as the growth rate starts to drop. Using the Dividend Discount Model (DDM), calculate the current share price and the total market value of the company's shares.

[10 marks]

(d) Based on the given information, along with the results from parts (a), (b), and (c), determine Solara's after tax weighted average cost of capital (WACC).

[5 marks]

(e) List the limitations of the DDM in firm valuation.

[4 marks]

(f) Based on the given information, estimate the cash flows of the new five-year project, taking into account relevant versus irrelevant values as well as the impact of capital allowances.

[12 marks]

(g) Using your answers from parts (d) and (f), recommend whether the company should proceed with the project based on the NPV method.

[5 marks]

(h) Numerically demonstrate how your recommendation in part (g) would change if tax costs were ignored.

[5 marks]

(i) Using the projected cash flows from part (f), estimate the project's Payback Period (PP) and Internal Rate of Return (IRR), and commend on the results.

[8 marks]

(j) Critically analyse the impact of taxation on the investment decision-making process.

[7 marks]

(k) In addition to tax implications, discuss other key factors that may affect investment decision-making.

[4 marks]

(l) Suppose the company is holding excess cash. The board is considering two alternatives: paying a special dividend or repurchasing shares. Using relevant theories, discuss how each option would affect the company's value.

[12 marks]

[Total 80 marks]

Please Turn Over

Section B Follows

Section B

Answer EITHER 4 OR 5 in this section

1. Discuss the capital structure decisions companies face, their implications for overall financial health, and how these decisions can affect market value and shape investor perceptions. Use diagrams to illustrate the relationship between capital structure and financial risk and to support your analysis.

[Total 20 marks]

OR

2. Discuss how ownership and control dynamics can influence the outcomes of mergers and acquisitions (M&A), and recommend various mechanisms that firms can adopt to effectively manage agency issues during the M&A process.

[Total 20 marks]
