

CHEMISTRY

Time allowed: 1.5 hours (90 minutes)

Answer TWO questions

You may use a calculator and a periodic table

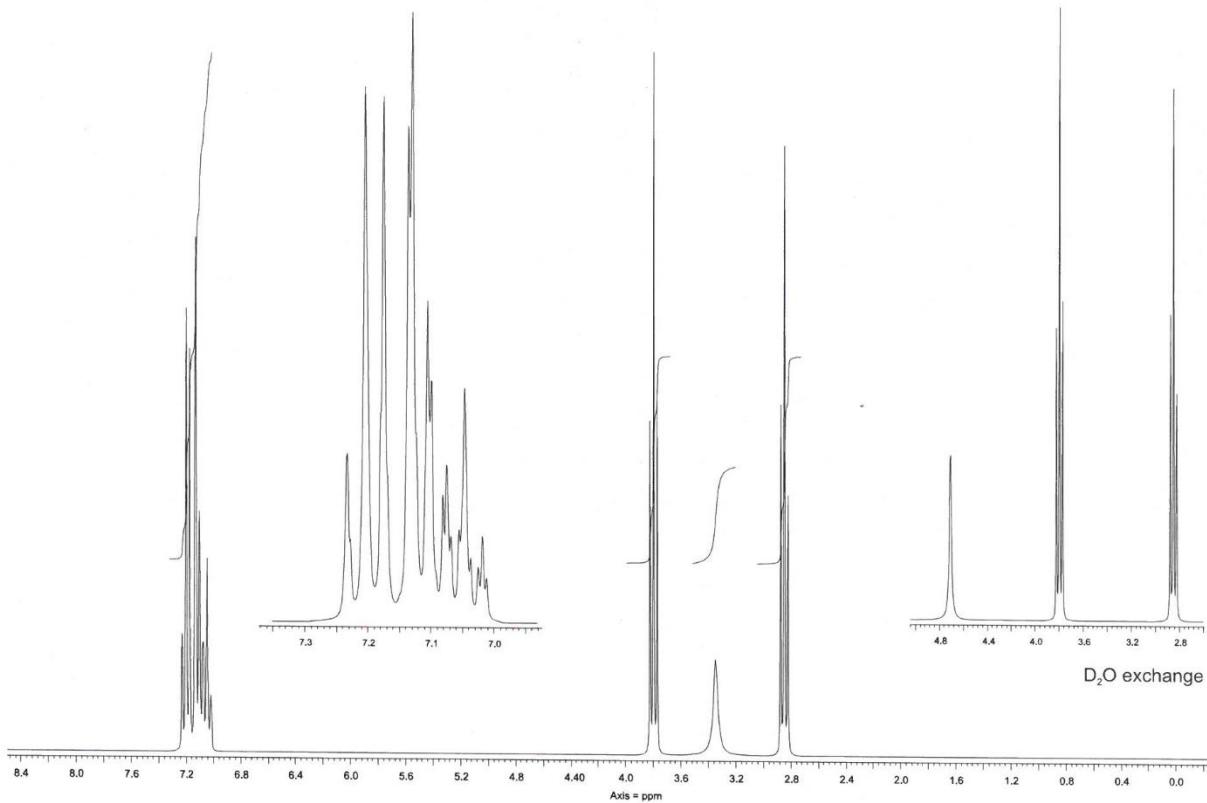

1. Write an essay to describe and explain the relative reactivity of the group 1 alkali metals. *[10 marks]*

2. This question is about titrimetric analysis.
Dilute aqueous phosphoric acid (H_3PO_4 , 0.0500 M, 25.0 cm³) was placed in a conical flask and was titrated with aqueous sodium carbonate (Na_2CO_3) of unknown concentration. Phenolphthalein was used as an indicator. When 17.8 cm³ of sodium carbonate had been added, the solution turned pink. *[10 marks]*
 - (a) Give the definition of a Lowry-Brønsted acid and a Lowry-Brønsted base.
 - (b) Write a balanced equation for the reaction between sodium carbonate (Na_2CO_3) and phosphoric acid (H_3PO_4).
 - (c) What is the number of moles of phosphoric acid (H_3PO_4) used in the reaction?
 - (d) What is the number of moles of sodium carbonate (Na_2CO_3) in the reaction?
 - (e) What is the concentration of the sodium carbonate (Na_2CO_3) solution in M?

3. This question is about preparation of solutions. *[10 marks]*
 - (a) In the context of chemistry, define the term “mole” and “molarity”.
 - (b) Give the equation that relates mass and moles of a substance.
 - (c) You have weighed out 20.0 g potassium chloride and dissolved it in water to obtain a solution with a total volume of 500 mL, what is the concentration of potassium chloride in M?
 - (d) 200 mL of a 0.250 M solution of monosodium dihydrogen phosphate is needed for a lab procedure. Calculate the weight of solute needed to prepare the solution.

4. Look at the four spectra on the next two pages and, using the data, deduce the structure of compound **T1**. Provide evidence for your structure. *[10 marks]*

Observed Nucleus ^1H // Observation frequency 270 MHz //Compound T1

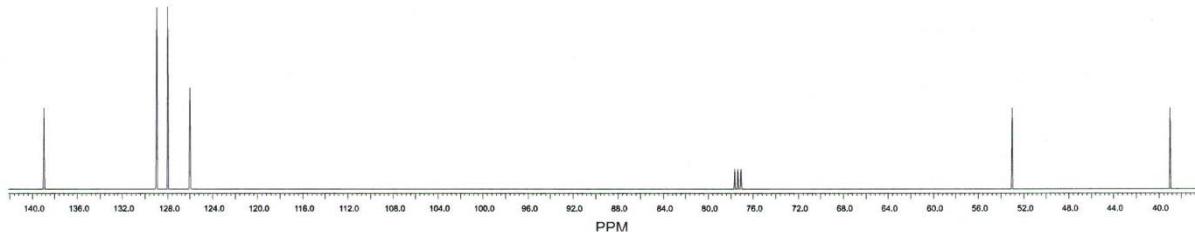

135 DEPT [no C_q, CH (up), CH₂ (down), CH₃ (up)]

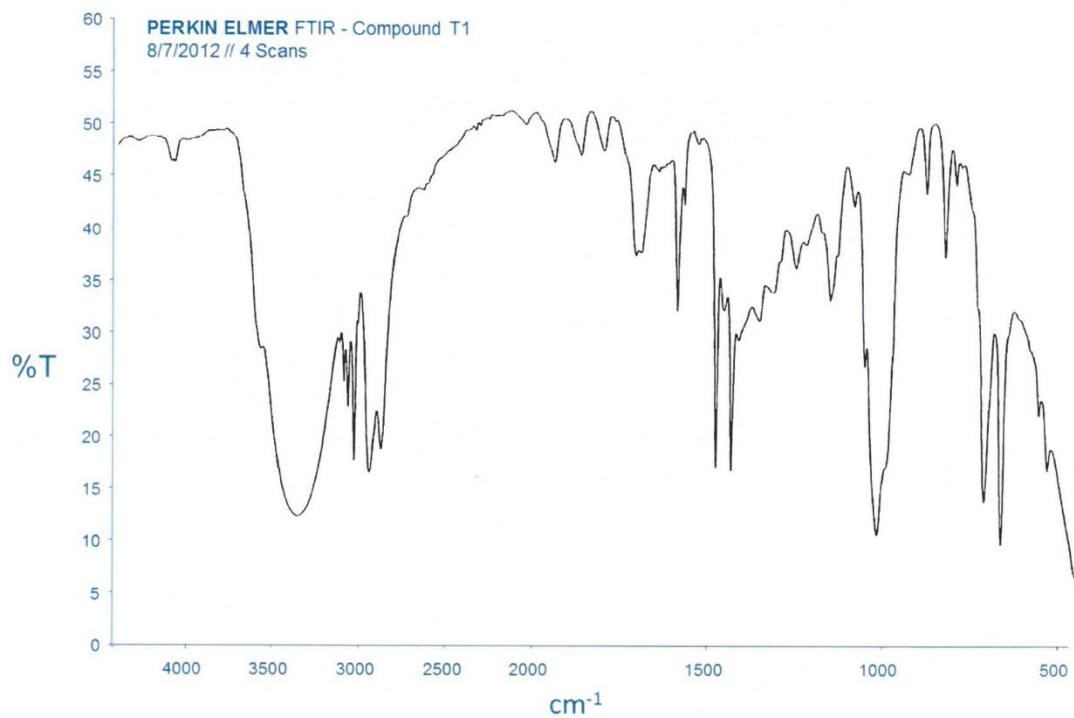

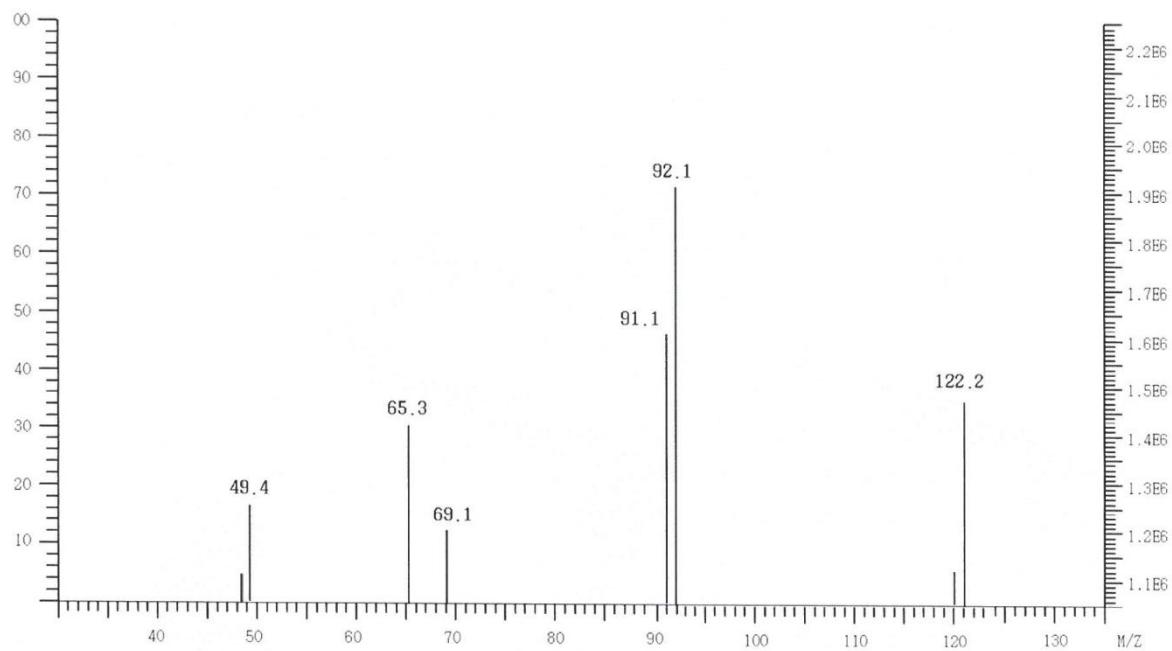

90 DEPT [no C_q, CH (up), no CH₂ or CH₃]

Observed Nucleus ^{13}C // Observation frequency 100 MHz //Compound T1
